

Twizy charge cable

The *Twizy charge cable* is an adapter that turns a charge point into a household outlet. This allows Twizy owners to charge their Twizy at any location where a (public) charge point is available.

Easy to use and robust design

The *Twizy charge cable* is easy to use. Just plug it in and activate the charge point. It is made of solid industrial quality plugs and therefore can safely be used in rain and snow.

The default length of the *Twizy charge cable* is 0.5 meter including plugs. The very durable plugs are black as well as the neopreen flexible cable. We are equipped to offer you an even wider choice of charge cables varying in colors, types and length.

Three versions, the default is non-locking and fits all charge points

Your needs in combination with the type of charge point define which version of the *Twizy charge cable* fits best. Three versions are available: non-locking, unlocking by charger and unlocking by adapter.

Non-locking: This *Twizy charge cable* can't be locked because of a special short nose of the plug. The special design of this charge cable makes it possible to use this *Twizy charge cable* also at AC fast chargers and chargers with tethered cable.

Unlocking by charger: This popular *Twizy charge cable* is tuned to the most common charging process. In many European countries it is normal practise that the charger locks and unlocks by Radio-frequency identification (RFID) or a mobile phone app. This *Twizy charge cable* is fully equipped to charge, lock and unlock at these standard charge points which include identification and payment.

Unlocking by adapter: In some special cases, (non public) charge points can have a so called 'plug & charge' mechanism. In this case the charge point will only release the *Twizy charge cable* when a special mounted keyswitch is used. Turning the keyswitch to off position orders the charging point to release the adapter.

Wide application and convenience

The use for this adapter is not limited to Twizy owners only. Potential users are other electric vehicles like motor cycles and mopeds. But also film crews, party boats (in Amsterdam channels) and cooling containers are known to use this charge cable to obtain power from (public) chargers.

LaadkabelFabriek.nl supplies charge cables for all electrical and plug-in hybrid cars.

At LaadkabelFabriek.nl we are working with electric cars and chargers since 2009. Therefore we have a lot of knowledge and experience in this domain. Special measurement equipment and tools are part of our workshop. We are happy to help you and offer you advice.
